

Unique Broadband Systems Ltd. (UBS) is a Canadian multinational, privately owned and operated company that specializes in design, development, manufacturing and life cycle maintenance of complete digital communication systems for voice, video and data in the broadcast, medical and defense industries.

With its head office and 60,000 square feet of facilities located in Toronto, Canada and 30,000 sq ft in Pittsburgh, USA, Unique Broadband Systems Ltd. is well-known worldwide for its strong focus on research and development. Most importantly however, UBS is recognized globally for its uncompromising approach to producing state-of-the-art satellite, military, television, radio and medical communication equipment, such as power amplifiers, transmitters, receivers, modulators and an array of passive components/waveguides. Key Satellite ground stations and components serve the Ka, Ku, X, C, S, L band frequencies.

UBS's President & CEO, David Dane is proud to announce a recent contract award valued at \$65,000 secured by Santo Aguanno, UBS Scientific and Medical. It is a very exciting time at UBS with the expansion of technology which supports the development of special amplifiers for minimally invasive, Microwave Surgical Ablation.

Please reach out and set up a meeting with Mr. Aguanno to learn about the latest solutions and technology UBS technologists create and UBS customers enjoy.

For immediate assistance please contact the UBS team members below.
