**Product Features**

- Direct RF output from 470 to 860 MHz in 1 Hz steps
- Superior Shoulders and MER
- SFN and MFN Support
- Adaptive Non-linear Pre-corrector
- Manual Linear and Non-linear Digital Pre-correctors
- GbE Transport Stream Input based on Pro-MPEG Forum CoP #3 / SMPTE 2022
- Interfaces for Web GUI, SNMP and Telnet remote control, machine to machine interface and software upgrades

**New Features**

**DVB-T2, DVB-SHA/SHB**

Supports all DVB-T2 modulation features including T2-MI interface support, single and multiple Physical Layer Pipes (PLPs), MFN/SFN operation and SIS/MISO transmission.

Supports all DVB-SHA/SHB modulation features for hybrid satellite/terrestrial broadcasting including SHA COFDM modulation and SHB Time-Division Multiplexing (TDM) as well as intra SH-frame time-interleaver compensation to permit code combining at the receiver.

**Optional Features**

- Internal GPS or GPS/GLONASS Receiver
- Integrated DVB-S/S2 Receiver
- Adaptive Linear and Non-linear Digital Pre-correctors
- 0 dBm to 10 dBm output
- DVB-SH Code Combining mode
- Optional RF Outputs: 30 MHz - 1 GHz, 1452 - 1492 MHz, 1610 - 1675 MHz, 1980 - 2010 MHz, 2560 - 2690 MHz

**Standards Supported**

- ATSC and ATSC-M/H compliant with A/53, A/54, A/64, A/110 and A/153
- ISDB-T/Ts compliant with ARIB STD-B31, ARIB STD-B10, ABNT NBR 15601:2007, SBTVD N01 and SBTVD N03
- DVB-T/H and DVB-T2 compliant with ETSI standards
- DVB-SH(A) and DVB-SH(B) compliant with ETSI standards
- DAB, DAB+ and T-DMB compliant with ETSI DAB standards and EU147
- CMMB compliant with GY/T 220.1-2006 and 220.2-2006
- DTMB compliant with GB20600-2006 and GY/T 229.1-2008

(specifications are subject to change without notice)
Universal Modulator
Model: DVU 5000

Description and Application

Overview
The UBS Universal Modulator Series utilizes the innovative UBS Universal Waveform engine, supporting all world digital standards for terrestrial broadcasting, including hybrid satellite/terrestrial systems.

The modular, state of the art design allows transmitter manufacturers and network operators to integrate the DVU 5000 into a system/network with relative ease. This open architecture design enables carriers to take advantage of a proven, robust platform while designing networks to meet current and future broadcast standards.

The Universal Modulator can be factory configured with the necessary hardware to support one, two or all the waveforms listed above. The user can easily switch from one waveform to another through software selection. UBS' modulators can also be upgraded in the field as standards evolve.

Using the latest technology, UBS has developed a direct conversion process that allows the Universal Modulator to provide an RF output from 470 MHz to 860 MHz with superior shoulders and MER. A range of optional RF outputs including L-Band and S-Band frequencies are also available and suitable for a wide range of international frequency assignments for both terrestrial and satellite uplink systems.

This series incorporates all of UBS high performance signal processing stages including integrated linear and non-linear pre-correctors. Full remote management and control as well as remote firmware and waveform upgrades are provided.

Signal Inputs
The DVU 5000 is provided with two serial DVB-ASI inputs and two serial G.703/G.704 inputs. The DVB-ASI inputs accept a MPEG-2 TS, a CMMB multiplex stream or an ISDB-T/Tb multiplexed TS. The G.703/G.704 inputs are used in DAB mode and accept either NA or NI signals. Optionally, two serial SMPTE-310M inputs can be installed.

The DVU 5000 also support a GbE Transport Stream input based on Pro-MEG CoP #3 / SMPTE 2022 protocol (DAB and DVB-T2 excluded).

The DVB-ASI, G.703/G.704 and SMPTE-310M inputs can be automatically selected, or assigned by the user. The automatic switching provides near seamless switching to a secondary transport stream in case the primary transport stream source fails (a truly valuable feature for broadcast applications.)

RF Output
The standard RF output covers a frequency range of 470 to 860 MHz in 1 Hz steps. 30 MHz to 1 GHz as well as L-Band and S-Band frequencies are optional.

The output level is adjustable from –10 dBm to 0 dBm (0 dBm to 10 dBm optional), in 0.1 dB steps and the user can set the polarity of the spectrum to Inverted or Non-inverted as required.

The direct conversion process offers superior performance with Shoulder Levels ≤ -55 dBc and MER ≥ 45 dB.

Adaptive Non-linear Pre-corrector
The Adaptive Non-linear Pre-corrector is a superior pre-distortion solution that compensates for RF Power Amplifier non-linearities including AM/AM and AM/PM distortion and protects against IMD and spectral regrowth while maximizing EVM performance.

The complex signal processing is done in the RF domain and supports a fully adaptive operation: the feedback signal (HPA output) is compared to the modulator’s RF output signal (HPA input) in order to optimize the correction which will improve the shoulders of the RF output.

The Adaptive Non-Linear Pre-Corrector is not recommended for satellite uplink applications as it can only correct for the signal distortion from the ground-based transmitter and not the full signal path distortion. The Manual Pre-Corrector can be configured for the full system path.

Manual Linear and Non-linear Digital Pre-correctors
The manual linear and non-linear digital pre-correctors are used to maximize the performance of the transmitter in which the modulator is installed.

• The Non-linear pre-corrector balances out gain and phase non-linearity in the transmitter RF power amplifier, thereby significantly reducing the in-band and out of band intermodulation products. Optimizing the transmitter’s performance will extend the coverage area. The performance requirement of the transmitter output filter, which is used to suppress radiation in adjacent channels below a maximum allowed level, will also be eased.

• The Linear pre-corrector balances out level and group delay variations that are seen across the channel bandwidth and caused by the transmitter mask filter and/or channel combiner filters. The linear optimization of the transmitter’s radiated signal allows the receiver’s channel equalizer to focus all of its correction capacity on level and group delay errors originating from the actual transmission path.
Description and Application

Web Interface
This feature allows remote control of the DVU 5000 via Ethernet interface and is based on an internal Web server. The Web pages stored on the Web server are designed as a complete graphical user interface (GUI) for testing the status and setting the parameters of the modulator. The Web Interface concept is popular because remote control with this system only requires a standard computer with a network interface card (NIC) and a Web browser (Microsoft Internet Explorer, Firefox, etc.).

SNMP Client
This feature allows remote control of the DVU 5000 in accordance with the SNMP protocol (Get, Set and SNMP traps). This remote control feature is intended for systems solutions where it is desired to integrate the control of a range of SNMP compliant equipment in a common management system.

Optional, the DVU 5000 RS232 interface can be dedicated for communication with a 3rd party UPS. In this case, the modulator is configured with an extra set of SNMP parameters and will actively monitor the UPS.

Product Specifications | Signal Processing

CMMB Mode

- FFT Mode: 4K
- Guard Interval: 1/8
- Code Rate (LDPC): 1/2, 3/4
- Constellation: BPSK, QPSK, 16-QAM
- Byte Interleave: Mode 1, Mode 2, Mode 3
- Reed Solomon Coding: RS(240,240), RS(240, 224), RS(240,192); RS(240,176)
- Scrambling Modes: 0, 1, 2, 3, 4, 5, 6, 7
- Number of Time Slots: 40
- Number of simultaneous multiplexed frames: 40
- Network Mode: SFN and MFN
- Bandwidth: 8 MHz
- Transmission Time delay: Adjustable, range: ±500 ms, step 100 ns
- Input: CMMB Multiplex Stream or GbE TS
- Time Information Input: RS232 serial port for GPS TOD Information

DTMB Mode

- FFT Mode: 3780, Single Carrier
- Guard Interval: 945, 595, 420 symbols
- Code Rate: 0.4, 0.6, 0.8
- Constellation: QPSK, 4QAM-NR, 16-QAM, 32-QAM, 64-QAM
- Frame Duration: 500 us, 666.67 us or 571.43 us
- Sub-carrier Spacing: 1.5 kHz, 1.75 kHz, 2 kHz
- Time Interleaver: 240, 720 symbols
- Network Mode: SFN and MFN
- Bandwidth: 8 MHz, 7 MHz, 6 MHz
- Input: MPEG-2 Transport Stream or GbE TS

Machine to Machine Interface
Depending on the waveform selected, the Universal Modulator RS232, RS485 or Ethernet ports can be used as a machine to machine interface. This is a valuable feature when control of an external power amplifier is required.

Internal GPS or GPS/GLONASS Receiver (optional)
The DVU 5000 can be equipped with an internal GPS or GPS/GLONASS receiver. In this case, the frequency references for the modulator and up-converter are derived from the internal GPS or GPS/GLONASS receiver.

DVB-S/S2 Receiver (optional)
With the addition of an integrated DVB-S/S2 Receiver, the DVU 5000 can demodulate an incoming signal and rebroadcast at a different frequency.

### Machine to Machine Interface

- Connector: Ethernet for all waveforms or
- RS485 for all waveforms or
- RS232 for all waveforms except CMMB

---

**Note 1:** The "10MHz" and "1PPS" are inputs, except when the modulator is equipped with an internal GPS or GPS/GLONASS receiver, where they become Monitoring Outputs (high impedance).
Universal Modulator
Model: DVU 5000

Product Specifications

RF Output
- Connector: N-type (F), 50 Ω
- Frequency Range:
  - 470 MHz - 860 MHz
  - 30 MHz - 1 GHz (optional)
  - 1452 MHz - 1492 MHz (optional)
  - 1610 MHz - 1675 MHz (optional)
  - 1980 MHz - 2010 MHz (optional)
  - 2560 MHz - 2690 MHz (optional)
- Frequency Step Size: 1 Hz
- Frequency Stability: Internal reference 0.05ppm / or in accordance with external ref. accuracy
- Spectrum Polarity: Inverted or non-inverted, selectable
- Level: -10 dBm to 0 dBm in 0.1 dB step (optional 0 dBm to 10 dBm)
- Level Stability: ±0.3 dB
- Return Loss: >20 dB
- Shoulder Level: ≤-55 dBc (Note 2)
- Spurious Level Outside Channel:
  - < -60 dBm
- MER:
  - Center frequency ±3.8 MHz ±0.3 dB (Note 3)
  - Center frequency ±3.8 MHz ±10 ns (Note 4)
- Amplitude Flatness:
  - Center frequency ±3.8 MHz ±0.3 dB
  - Center frequency ±3.8 MHz ±10 ns
- Phase Noise SSB:
  - Measured at 474 MHz
  - 10 Hz: < -60 dBc/Hz
  - 100 Hz: < -85 dBc/Hz
  - 1 kHz: < -105 dBc/Hz
  - 10 kHz: < -120 dBc/Hz
  - 1 MHz: < -135 dBc/Hz
- DAB Output Spectrum Mask:
  - Compliant with ETS 300 401

Note 2: Shoulder measurements were performed with Agilent E4443A PSA Series Spectrum Analyzer.

Note 3: MER measurements were performed on a DVB-T waveform with an Agilent E4443A PSA Series Spectrum Analyzer in conjunction with Agilent E9285B Digital Video Analysis Modulation software.

Note 4: Levels are measured in 10 kHz bandwidth, where 0 dB is the level of the carriers at the edge of the spectrum. Harmonics and spurious are not included.

*Model: DVU 5000*

### Product Specifications

#### Power Supply
- **Voltage**: 100 - 240 VAC  
- **Frequency**: 50 - 60 Hz  
- **Power Consumption**: max. 45 VA (70 VA with +10 dBm RF amplifier and GPS receiver installed)
- **Harmonic Correction**: EN61000-3-2

#### Environmental
- **Operating Temperature**: 0°C to +50°C (+32°F to +122°F)  
- **Storage Temperature**: -30°C to +70°C (-22°F to +158°F)  
- **Relative Humidity**: max. 95%
- **Cooling**: Temperature controlled fan to assist natural convection

#### Mechanical
- **Size**: 1 U of 19” wide cabinet  
- **Dimension (W x H x D)**: 483mm x 44mm x 521mm (19” x 1.75” x 20.5”)
- **Weight**: 6 kg (13 lbs)
- **Transport and Storage**: Vibration acc. to IEC Publ 68

#### ETSI Compliance
- **Health**: Not Applicable. No Antenna  
- **EMC**: EN 301 489-1 V1.8.1
- **Radio**: EN 302 296 V1.1.1

  (The technical requirement of Clause 4.3 was substituted for Clause 8.2 of EN 301 489-1 using the Class A limits specified in Table 4.)

#### CE Compliance
- This equipment is CE Compliant.

  ![CE Mark](image)

**Note 5**: Greater improvement is possible under particular applications. Performance depends upon power level and waveform.

---

**Adaptive Non-linear Pre-correction**

- **HPA FB Connector**: To be coupled from the PA output when the Adaptive Pre-corrector is used
- **Level**: -15 dBm to 0 dBm
- **Frequency**: 470 MHz to 860 MHz
- **Spectral Regrowth Reduction**: 7 dB ±2 dB (Note 4)

**Manual Digital Pre-Correction**

**Non-Linear Pre-Correction**

- **Curve Formats**: S 21 and VO/VI  
- **Amplitude Scale**: Linear and Logarithmic  
- **Correction Points**: Max. 256, user-defined position  
- **Spectral Regrowth Reduction**: Max. 12 dB, subject to available headroom  
- **Phase Correction**: -6 to +30 degrees, subject to available headroom

**Linear Pre-Correction**

- **Correction Points**: 61  
- **Point Spacing**: 1/60 of nominal spectrum BW  
- **Amplitude Correction**: ±10 dB  
- **Amplitude Resolution**: 0.01 dB  
- **Group Delay Correction**: ±2000 ns  
- **Group Delay Resolution**: 1 ns  
- **Peak Power Clip Level**: +17 dB to +7 dB (peak power relative to average RMS level)

**Note**: Greater improvement is possible under particular applications. Performance depends upon power level and waveform.

---

**Power Supply**

- **Voltage**: 100 - 240 VAC
