

Unique Broadband Systems Ltd. (UBS) secures another Canadian Repack order

UBS is a Canadian multinational, privately owned and operated company that specializes in design, development, manufacturing and life cycle maintenance of complete digital communication systems for voice, video and data in the broadcast, medical and defense industries.

With its head office and 60,000 square feet of facilities located in Toronto, Canada and 11,000 sq ft in Pittsburgh, USA, Unique Broadband Systems Ltd. is well-known worldwide for its strong focus on research and development. Most importantly however, UBS is recognized globally for its uncompromising approach to producing state-of-the-art satellite, military, digital television, radio and medical communication equipment, such as power amplifiers, transmitters, receivers, modulators and an array of passive components/waveguides. UBS-Axcera and LARCAN brands focus on efficient rechannel services to support USA and Canada mandate.

UBS President & CEO, David Dane commented that the re-pack, rechannel requirements by legacy customers are consistently flowing. These customers invested in Axcera and LARCAN technology and have relied on Axcera and LARCAN technology to stay on the air. UBS is providing serviced in a manner that comply with the FCC financial support and that's a tremendous benefit to the broadcasters.

Please reach out and set up a meeting with anyone of the UBS team as they will update you on the latest solutions and technology UBS customers enjoy.
