8-Way Combiner/Divider

Description and Application

UBS offers a unique solution to broadband power combining and division with an innovative line of 2-way through 8-way Wilkinson combiners/dividers.

A well-known advantage of Wilkinson dividers lies in providing improved input and output VSWR performance and superior isolation between the collecting ports. An outstanding feature of our design is that it is optimized for broadband operation over all wireless frequency bands from 500 MHz to 3000 MHz. This has been achieved by invoking a multi-section stripline construction together with a judicious electromagnetic optimization with the help of the state-of-the art 3D modeling software.

Other distinctive features include excellent amplitude and phase balance, low insertion loss, and power handling capability of up to 20 Watts at the common port.
